

Name : TESTNOW

Patient ID : SC23F000002

Gender : Male

Place : Bangalore

Age : 62

A/c Status :

Lab No. : SC1

Ref By : me

Date & Time : 11/07/2024 15:51:32

Test Category	Test Name	Results	Units	Bio. Ref. Interval
Vector Borne Markers	Dengue IgM/IgG	1.5*	-	≤1.0

Summary

Dengue viruses belong to the family Flaviviridae and have 4 subtypes (1-4). Dengue virus is transmitted by the mosquito Aedes aegypti and Aedes albopictus, widely distributed in Tropical and Subtropical areas of the world. Dengue is considered to be the most important arthropod borne viral disease due to the human morbidity and mortality it causes. The disease may be subclinical, self-limiting, febrile or may progress to a severe form of Dengue haemorrhagic fever or Dengue shock syndrome.

Index	Remarks
<0.9	No detectable antibodies found; does not rule out infection, additional testing required after 7 – 14 days if infection is suspected
0.9 – 1.1	Retesting after 1 week
>1.1	Antibodies detected/ Dengue confirmed

Note:

1. Recommended test is NS1 Antigen in the first 5 days of fever. After 7-10 days of fever, the recommended test is Dengue fever antibodies IgG & IgM
2. Cross reactivity is seen in the Flavi virus group between Dengue virus, Murray Valley encephalitis, Japanese encephalitis, Yellow fever & West Nile viruses

IMPORTANT INSTRUCTIONS

- Test results pertain to specimen submitted
- All test results are dependent on the quality of sample received
- Investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the referring physician
- Report delivery may be delayed due to unforeseen conditions
- Certain tests may require further testing at additional costs for derivation of exact value
- Test results may show inter/Intra laboratory variations
- The courts of Delhi shall have exclusive jurisdiction in all disputes/claims concerning test(s) and/or result of test(s)
- Test results are not valid for medico legal purposes.
