

Name : TESTNOW

Patient ID : SC23F000002

Gender : Male

Place : Bangalore

Age : 62

A/c Status :

Lab No. : SC1

Ref By : me

Date & Time : 10/07/2024 20:39:20

Test Category	Test Name	Results	Units	Bio. Ref. Interval
Cardiac	Tnl	0.1*	ng/mL	<0.05

Summary

Troponins are a family of proteins found in skeletal and heart (cardiac) muscle fibres that are responsible for muscle contraction. Troponin-I detects the presence of troponin in blood and presence in excessive amounts can be indicative of heart attack.

Status	Bio Reference Interval (ng/mL)
Normal Levels	<0.05
Observational Zone/ Above Optimal	0.05 – 0.50
High/ Requires attention	>0.50

Interpretations

A high troponin and even slight elevations can pinpoint towards some degree of heart damage. When a person has significantly elevated troponin levels and, in particular, a rise in the results from a series of tests done over several hours, then in all probabilities it means that the person has had a recent heart attack. When the test shows normal troponin, values measured over specific time intervals, it rules out the possibility of any heart damage. In such a case, signs and symptoms could be due to causes that are not pertaining to the heart.

IMPORTANT INSTRUCTIONS

- Test results pertain to specimen submitted
- All test results are dependent on the quality of sample received
- Investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the referring physician
- Report delivery may be delayed due to unforeseen conditions
- Certain tests may require further testing at additional costs for derivation of exact value
- Test results may show inter/intra laboratory variations
- The courts of Delhi shall have exclusive jurisdiction in all disputes/claims concerning test(s) and/or result of test(s)
- Test results are not valid for medico legal purposes.
