

Name : TESTNOW

Patient ID : SC23F000002

Gender : Male

Place : Bangalore

Age : 62

A/c Status :

Lab No. : SC1

Ref By : me

Date & Time : 11/07/2024 14:08:39

Test Category	Test Name	Results	Units	Bio. Ref. Interval
Respiratory Markers	Legionella Ag	1.5*	-	<1.0

Summary

Legionnaires' disease is a severe form of pneumonia — lung inflammation usually caused by infection. It's caused by a bacterium known as legionella.

The legionella bacterium also causes Pontiac fever, a milder illness resembling the flu. Pontiac fever usually clears on its own, but untreated Legionnaires' disease can be fatal. Although prompt treatment with antibiotics usually cures Legionnaires' disease, some people continue to have problems after treatment.

Result	Interpretation
Positive	Legionella Antigen detected in the sample.
Negative	Legionella Antigen not detected/ below detectable levels

Note –

1. Inadequate collection and handling may affect the results adversely.
2. Humidity and temperature may affect the test results adversely
3. A negative result despite the presence of symptoms doesn't rule out presence of infection, but suggests the presence is under detectable limits.

IMPORTANT INSTRUCTIONS

- Test results pertain to specimen submitted
- All test results are dependent on the quality of sample received
- Investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the referring physician
- Report delivery may be delayed due to unforeseen conditions
- Certain tests may require further testing at additional costs for derivation of exact value
- Test results may show inter/Intra laboratory variations
- The courts of Delhi shall have exclusive jurisdiction in all disputes/claims concerning test(s) and/or result of test(s)
- Test results are not valid for medico legal purposes.
