

Units

mg/L

Name : TESTNOW Patient ID : SC23F000002 Gender : Male

Test Name

hs-CRP

Age: 62 A/c Status:

.90.02

Lab No. : SC1 Ref By : me Date & Time : 10/07/2024 20:47:45

Bio. Ref. Interval

<1.0

Cardio CRP in mg/L	Cardiovascular Risk
<1.0	Low
1.0 – 3.0	Average
3.0 – 10.0	High
>10.0	Persistent elevation may represent Non Cardiovascular Inflammation

Results

10*

Note:

To assess vascular risk, it is recommended to test hsCRP levels 2 or more weeks apart and calculate the average

Comments:

Place: Bangalore

Test Category

Cardiac

High sensitivity C Reactive Protein (hsCRP) significantly improves cardiovascular risk assessment as it is the strongest predictor of future coronary events. It reveals the risk of future Myocardial infarction and Stroke among healthy men and women, independent of traditional risk factors. It identifies patients at risk of first Myocardial infarction even with low to moderate lipid levels. The risk of recurrent cardiovascular events also correlates well with hs CRP levels. It is a powerful independent risk determinant in the prediction of incident diabetes.

IMPORTANT INSTRUCTIONS

- · Test results pertain to specimen submitted
- · All test results are dependent on the quality of sample received
- · Investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the referring physician
- · Report delivery may be delayed due to unforeseen conditions
- · Certain tests may require further testing at additional costs for derivation of exact value
- · Test results may show inter/intra laboratory variations
- · The courts of Delhi shall have exclusive jurisdiction in all disputes/claims concerning test(s) and/or result of test(s)
- · Test results are not valid for medico legal purposes.
