Place: Bangalore Age: 62

A/c Status:

Lab No.: SC1 Ref By: me Date & Time: 11/07/2024 14:07:25

Test Category	Test Name	Results	Units	Bio. Ref. Interval
Respiratory Markers	RSV AG	1.5*	-	<1.0

Summary

Respiratory syncytial virus (RSV) causes infections of the lungs and respiratory tract. It's so common that most children have been infected with the virus by age 2. The respiratory syncytial virus can also infect adults.

can cause severe infection in some people, including babies 12 months and younger (infants), especially premature infants, older adults, people with heart and lung disease, or anyone with a weak immune system (immunocompromised).

Result	Interpretation	
Positive	Respiratory Syncytial Virus Antigen detected in the sample.	
Negative	Respiratory Syncytial Virus Antigen not detected/ below detectable levels	

Note -

- Inadequate collection and handling may affect the results adversely.
- 2. Humidity and temperature may affect the test results adversely
- 3. A negative result despite the presence of symptoms doesn't rule out the presence of infection but suggests the presence is under detectable limits

IMPORTANT INSTRUCTIONS

- · Test results pertain to specimen submitted
- · All test results are dependent on the quality of sample received
- · Investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the referring physician
- · Report delivery may be delayed due to unforeseen conditions
- · Certain tests may require further testing at additional costs for derivation of exact value
- · Test results may show inter/Intra laboratory variations
- · The courts of Delhi shall have exclusive jurisdiction in all disputes/claims concerning test(s) and/or result of test(s)
- · Test results are not valid for medico legal purposes.
